PROFILE

Full-stack developer specializing in backend systems and AI integration, with hands-on experience building and deploying applications using Python and Node.js. Proficient in designing RESTful APIs, integrating ML models into production, and delivering end-to-end web solutions. Currently pursuing B.Tech in Computer Science at ITER, SOA University.

EDUCATION

Institute of Technical Education and Research (ITER), SOA University, Bhubaneswar

B.Tech Computer Science and Engineering | CGPA: 7.73

2023 – 2027

Mother's Public School, Bhubaneswar

XII (CBSE) | 78%

2022 – 2023

X (CBSE) | 91%

2020 – 2021

TECHNICAL SKILLS

Languages : Python, Javascript

Web Technologies : HTML, CSS, Vanilla JS

Libraries & Frameworks : FastAPI, Node.js, Express.js, Chart.js, NumPy, Pandas, scikit-learn

Databases : MySQL, MongoDB

Core Concepts : Data Structures & Algorithms, OOPs, Computer Networking, REST APIs, DBMS

PROJECTS

CompanyRadar | Full-Stack AI Business Intelligence Platform | Github | Live Demo

2026

- Built and deployed a Node.js/Express REST API on Render with JWT authentication, bcrypt password hashing (salt rounds: 12), and rate limiting across auth and analysis routes — storing user accounts and search history in MongoDB Atlas
- Integrated NewsAPI and SerpAPI to aggregate real-time news and web data per company, enabling Google Gemini AI to generate context-aware SWOT analysis, competitor mapping, and risk assessments with a 3-model fallback chain and retry logic ensuring reliability during rate limit or service outages
- Integrated Twelve Data API to fetch 10-day stock price history enabling dynamic Chart.js visualizations for public companies, and built a client-side PDF export pipeline using html2canvas and jsPDF

PrepRadar | AI-Powered Placement Salary Predictor | Github

2026

- Built and deployed a FastAPI REST API on Render with CORS middleware and Pydantic input validation across 5 placement dimensions — storing pre-computed model comparison results in JSON and serving real-time readiness scores with tier classification and personalized roadmap generation
- Trained and compared Linear Regression, Random Forest, and XGBoost models with 5-fold cross-validation on a 2,000-record synthetic placement dataset — achieving $R^2=0.90$ and MAE below 1.5 LPA with the best model serialized via joblib and loaded at API startup for low-latency inference
- Collaborated with a frontend developer — co-designed the API response schema, iterated on output fields based on UI feedback, and delivered a fully integrated product with React/Vite on Vercel consuming the FastAPI backend on Render
